**MEASURING & CONSTRUCTION-** Shutters were the first storm windows ... Most often shutters are sized to fill or cover the same opening as a storm window or screen when they are closed. Although shutters today are often installed for decorative purposes, they look best when sized for the window opening. If shutters will be functional, measure the area they will fill or cover when closed. Allow 1/4" clearance all around the opening for shutters that will close into a window pocket (casing). Mortise & tenon construction is time tested, proven to provide long life in wood shutters, among many other wood products and antiques still with us today. Cedar is a renewable resource, the preferred wood for exterior shutters, and it is naturally decay resistant.

**HINGES & HOLDBACKS** - Lift-off hinges and pintles are common ways of mounting shutters to the casing. Holdbacks (shutter dogs) are used to "hold" the shutter open. We offer several hinge types and offsets, along with decorative or hidden holdbacks, latches, pull rings, and more... Stainless steel options are available for ocean areas.

Brick Construction - Inside Mount

**NO!** These plastic shutters make these houses look worse instead of better. They are the wrong size for the window and mounted in the wrong location on the house.

**YES!** These real wood shutters are correctly sized for the window opening, mounted using authentic lift-off hinges & holdbacks. Real wood shutters make all the difference when the project is done right!
